

# A40T Triangular Truss

The A40T triangular Truss system consists of three main tubes and intermediate tubes, used for medium-duty loads. Fairs are indispensable for medium projects.

Connections in A40T model, Both conical Socket and Single pin connection systems can be applied optionally. Thanks to

its 3 mm wall thickness, the A40T model allows installation with heavier loads and wider distances. Static analysis and structural designs were made according to DIN 4112, DIN 4113-1, DIN 4113-1 A1 and DIN 4113-2 standards, and TUV SUD approved loading tables were prepared.

Conical  
Socket

While strength and durability are maintained at a high level with the Conical Socket, the biggest advantage of the connection is that it provides fast and easy assembly to the truss. Also, as a connection type, ATSS represents the widest range of aluminum truss products. The application is almost limitless, from small lighting truss design to large scale roof systems.

A40T	Main Tube	Diagonals	Alloy	A	B	C	D
